Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

probable outer membrane protein - Helicobacter pylori (strain J99)
C.Species: Helicobacter pylori
A;Variety: strain J99
C.Date: 12-Feb-1999 #sequence_revision 12-Feb-1999 #text_change 26-May-2000
C;Accession: G71899
E.Alm, R.A.; Ling, L.S.L.; Moir, D.T.; King, B.L.; Brown, E.D.; Doig, P.C.; Smith, D.R.; Ives, C.; Gibson, R.; Merberg, D.; Mills, S.D.; Jiang, Q.; Taylor, D.E.; Vovis, G.F.; Nature 397, 176-180, 1999
A;Title: Genomic sequence comparison of two unrelated isolates of the human gastric path A;Reference number: A71800; MUID:99120557; PMID:9923682
A;Accession: G71896
A;Accession: G71896

"Genetic and structural characterization of endA. A membrane-bound nuclease required for transformation of Streptococcus pneumoniae.";
0. Mol. Biol. 213:727-738(1990).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              J. Bacteriol. 183:5709-5717(2001).

-!- FUNCTION: By degrading DNA that enters the cell, plays a role the competence of cells to be transformed.
-!- SUBCELLULAR LOCATION: Membrane-bound.
-!- SIMILARITY: Belongs to the DNA/RNA non-specific endonuclease
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         SENGENCE FROM N. 1900 A. 1900 A. 1900 A. 1900 A. 1900 A. 1900 A. 1900 A. 1900 A. 1900 A. 1900 A. 1900 A. 1900 A. 1900 A. 1900 A. 1900 A. 1900 A. 1900 A. 1900 A. 1900 A. 1900 A. 1900 A. 1900 A. 1900 A. 1900 A. 1900 A. 1900 A. 1900 A. 1900 A. 1900 A. 1900 A. 1900 A. 1900 A. 1900 A. 1900 A. 1900 A. 1900 A. 1900 A. 1900 A. 1900 A. 1900 A. 1900 A. 1900 A. 1900 A. 1900 A. 1900 A. 1900 A. 1900 A. 1900 A. 1900 A. 1900 A. 1900 A. 1900 A. 1900 A. 1900 A. 1900 A. 1900 A. 1900 A. 1900 A. 1900 A. 1900 A. 1900 A. 1900 A. 1900 A. 1900 A. 1900 A. 1900 A. 1900 A. 1900 A. 1900 A. 1900 A. 1900 A. 1900 A. 1900 A. 1900 A. 1900 A. 1900 A. 1900 A. 1900 A. 1900 A. 1900 A. 1900 A. 1900 A. 1900 A. 1900 A. 1900 A. 1900 A. 1900 A. 1900 A. 1900 A. 1900 A. 1900 A. 1900 A. 1900 A. 1900 A. 1900 A. 1900 A. 1900 A. 1900 A. 1900 A. 1900 A. 1900 A. 1900 A. 1900 A. 1900 A. 1900 A. 1900 A. 1900 A. 1900 A. 1900 A. 1900 A. 1900 A. 1900 A. 1900 A. 1900 A. 1900 A. 1900 A. 1900 A. 1900 A. 1900 A. 1900 A. 1900 A. 1900 A. 1900 A. 1900 A. 1900 A. 1900 A. 1900 A. 1900 A. 1900 A. 1900 A. 1900 A. 1900 A. 1900 A. 1900 A. 1900 A. 1900 A. 1900 A. 1900 A. 1900 A. 1900 A. 1900 A. 1900 A. 1900 A. 1900 A. 1900 A. 1900 A. 1900 A. 1900 A. 1900 A. 1900 A. 1900 A. 1900 A. 1900 A. 1900 A. 1900 A. 1900 A. 1900 A. 1900 A. 1900 A. 1900 A. 1900 A. 1900 A. 1900 A. 1900 A. 1900 A. 1900 A. 1900 A. 1900 A. 1900 A. 1900 A. 1900 A. 1900 A. 1900 A. 1900 A. 1900 A. 1900 A. 1900 A. 1900 A. 1900 A. 1900 A. 1900 A. 1900 A. 1900 A. 1900 A. 1900 A. 1900 A. 1900 A. 1900 A. 1900 A. 1900 A. 1900 A. 1900 A. 1900 A. 1900 A. 1900 A. 1900 A. 1900 A. 1900 A. 1900 A. 1900 A. 1900 A. 1900 A. 1900 A. 1900 A. 1900 A. 1900 A. 1900 A. 1900 A. 1900 A. 1900 A. 1900 A. 1900 A. 1900 A. 1900 A. 1900 A. 1900 A. 1900 A. 1900 A. 1900 A. 1900 A. 1900 A. 1900 A. 1900 A. 1900 A. 1900 A. 1900 A. 1900 A. 1900 A. 1900 A. 1900 A. 1900 A. 1900 A. 1900 A. 1900 A. 1900 A. 1900 A. 1900 A. 1900 A. 1900 A. 1900 A. 1900 A. 1900 A. 1900 A. 1900 A. 1900 A. 1900 A. 1900 A. 1900 A. 1900 A. 1900 A. 1900 A. 1900 A. 1900 A. 1900

28-FEB-2003 (Rel. 41, Last annotation update)
Amylopullulanase precursor (Alpha-amylase/pullulanase) (Pullulanase type II) [Includes: Alpha-amylase (EC 3.2.1.1) (1.4-alpha-D-glucan glucanohydrolase); Pullulanase (EC 3.2.1.1) (1.4-alpha-D-glucan glucanohydrolase); Alpha-dextrin endo-1,6-alpha-glucanohydrolase))
                                                                                                                                                                                                                                                                                                                                                                                                             (Clostridium thermosulfurogenes): molecular analysis of the gene, attachment to the cell surface.";

J. Bacteriol. 176:329-3302(1994).

-! CATALYTIC ACTIVITY: Endohydrolysis of 1,4-alpha-glucosidic linkages in oligosaccharides and polysaccharides.

-! CATALYTIC ACTIVITY: Hydrolysis of (1.-s)-alpha-blucosidic linkages in pullulan and in amylopectin and glycogen, and the alpha and beta-limit dextrins of amylopectin and glycogen.

-! SUBCELLULAR LOCATION: CELL-BOUND. IT C-TERMINUS MAY SERVE AS A S-LAYER ANCHOR.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 -1- PTM: GLYCOSYLATED.
-1- SIMILARITY: BELONGS TO FAMILY 13 OF GLYCOSYL HYDROLASES, ALSO KNOWN AS THE ALPHA-AMYLASE FAMILY.
-1- SIMILARITY: Contains 2 fibronectin type III domains.
-1- SIMILARITY: Contains 3 S-layer homology (SLH) domains.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Hydrolase, Glycosidasë, Carbohydrate metabolism, Signal, Repeat,

Submitted (NOV-1993) to the EMBL/GenBank/DDBJ databases.
-!- FUNCTION: DNA-DEPENDENT RNA POLYMERASE CATALYZES THE TRANSCRIPTION
OF DNA INTO RNA USING THE FOUR RIBONUCLEOSIDE TRIPHOSPHATES AS
                                                                                                                                                                                                                                                                                                                       SUBUNIT: In chloroplasts, the RNA polymerase is composed of four subunits: alpha, beta, beta', and beta".
SUBCELLULAR LOCATION: Chloroplast.
SIMILARITY: Belongs to the RNA polymerase beta chain family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      polymerase, Transcription, Chloroplast.

"Characterization of the CHD family of proteins.";
Proc. Natl. Acad. Sci. U.S.A. 94:11477(1997).
-!- FUNCTION: SEQUENCE-SELECTIVE DNA-BINDING PROTEIN. COULD PLAY AN IMPORTANT ROLE IN GENE REGULATION.
-!- SUBCELLIAR LOCATION: Nuclear.
-!- SIMILARITY: BELONGS TO THE SNF2/RAD54 HELICASE FAMILY.
-!- SIMILARITY: Contains 2 chromo domains.
                                                                                                                                                                                                                                                     Euteleostomi;
